

1. Identify 2 Target User Segments

Target User Segment 1: Active Crypto Traders

Why them?

Active crypto traders are constantly looking for an edge in the market. They are comfortable trying new tools, actively engage with Web3 communities, and provide valuable feedback. As early adopters, they can become strong advocates if they find the product useful.

Pain Points AgentVault Solves

- Information overload from multiple crypto platforms.
- Emotional and impulsive trading decisions.
- Time-consuming market research.
- Difficulty identifying profitable opportunities quickly.

AgentVault can act as an AI trading assistant by providing market insights, reducing research time, and helping traders make more informed decisions.

Where I Would Find Them

Online

- X (Twitter) Crypto Community
- Discord trading servers
- Telegram crypto groups
- Reddit (r/CryptoCurrency, r/Bitcoin)
- Binance Square
- CoinMarketCap Community

Offline

- Blockchain conferences
- Crypto meetups
- Web3 networking events

Target User Segment 2: University Blockchain Clubs & Student Investors

Why them?

Students are highly curious about AI and crypto and are eager to experiment with new technologies. Blockchain clubs often influence hundreds of students, making them an excellent channel for acquiring multiple users through a single partnership.

Pain Points AgentVault Solves

- Limited experience analyzing crypto markets.
- Lack of affordable AI-powered research tools.
- Need for educational guidance while trading or investing.

AgentVault can help students learn market analysis while giving them access to AI-powered insights.

Where I Would Find Them

Online

- LinkedIn
- Discord university communities
- GitHub student communities
- Telegram Web3 groups

Offline

- University blockchain clubs
- Hackathons
- Startup incubators
- Tech festivals

2. Outreach Example (LinkedIn)

Subject: Early Access to AgentVault

Hi There ,

I noticed you're active in the crypto space and thought you might be interested in something we're building.

I'm part of the team at **AgentVault**, an AI-powered crypto trading assistant currently in its MVP stage. We're inviting a small group of early users to test the platform and provide feedback before the public launch.

In return, you'll get exclusive early access and the opportunity to help shape future features based on your experience.

Would you be interested in giving it a try? I'd love to share more details.

Thanks,

Misbah Manzoor

3. GTM (Go-To-Market) Ideas

Idea 1: University Web3 Ambassador Program

Partner with blockchain clubs across universities and recruit student ambassadors. Give each ambassador an exclusive referral code and reward the top performers with premium access, certificates, or merchandise.

Why it works: One ambassador can bring an entire student community at a very low acquisition cost.

Idea 2: "Trade with AI" Community Challenge

Host a 7-day challenge where participants compare their trading decisions with AgentVault's AI suggestions and share their experience on X or Discord.

Why it works: Generates authentic user-generated content, builds trust, and encourages community engagement.

Idea 3: Discord Office Hours

Host weekly live sessions on Discord where the team demonstrates AgentVault, answers questions, and collects feedback from early users.

Why it works: Creates direct relationships with users, improves the product through feedback, and increases retention.

Why This Strategy?

To acquire the first 50 users, I would focus on communities that are already interested in crypto and AI rather than spending money on paid advertising. My approach combines community engagement, partnerships, and referral-based growth to build trust and gather high-quality feedback. This helps validate the product while creating advocates who can promote AgentVault organically.
